Professional Summary

AI-focused Senior Software Quality Assurance Engineer with 3+ years of experience in Manual Testing, API Testing, AI Quality Assurance and Automation Testing. Specialized in validating LLMs, Conversational AI, AI Voice Agents, Prompt Engineering, RAG-based applications and intelligent workflows. Strong background in exploratory testing, business logic validation, root-cause analysis, SQL validation and API testing. Passionate about building reliable, trustworthy AI products through critical thinking and real-world scenario testing.

Technical Skills

AI QA: LLM Testing, Prompt Testing, Conversational AI, AI Voice Agents, RAG Validation

Testing: Manual Testing, Functional Testing, Regression Testing, Smoke Testing, Exploratory Testing, API Testing

Automation: Selenium, Appium

Tools: Postman, Jira, SQL

Methodologies: Agile, Scrum, Root Cause Analysis

Professional Experience

Senior Software Quality Assurance Engineer Level 1 | Devorbis

Duration: 2.5 Years

- Promoted from Software QA Engineer to Senior SQA Engineer based on performance and technical contribution.
- Owned quality validation for AI-powered applications including LLMs, AI Voice Agents, AI Chats and RAG-enabled systems.
- Designed comprehensive happy-path, negative, edge-case and real-world scenarios for AI behaviour validation.
- Validated prompt quality, conversation flow, hallucination handling, business rules and escalation behaviour.

- Performed API testing with Postman and backend verification using SQL.
- Worked closely with developers, AI engineers and product teams to resolve high-impact issues before production.
- Supported automation testing using Selenium and Appium.

Software Quality Assurance Engineer | Compilex Technologies

Duration: 6 Months

- Performed functional, regression, smoke and integration testing.
- Created and executed test cases and reported defects through Jira.
- Validated REST APIs using Postman.
- Collaborated with developers during sprint testing and release validation.

AI QA Projects

AI Voice Agents: Validated inbound/outbound voice agents, conversation quality, interruption handling, business rules, appointment flows and edge cases.

LLM & Prompt Testing: Tested prompts for accuracy, consistency, safety, context retention and expected business responses.

RAG Validation: Verified retrieval accuracy, grounding and response relevance using knowledge-base driven AI systems.

Automation Workflow QA: Validated API integrations, workflow execution, notifications and end-to-end business processes.

Key Achievements

- Promoted to Senior SQA Engineer within the organization.
- Improved AI product reliability by identifying critical conversation-flow and edge-case defects before release.
- Built structured AI testing approaches covering prompts, workflows and real-world user scenarios.
- Worked across QA, Development and Product teams to deliver stable production releases.

Education

Bachelor of Science in Software Engineering (BSSE)
2019 – 2023
